# Digitizer MBX Software

Developed in a collaborative effort with the industry's top embroidery software specialist, JANOME's Digitizer software combines easy to use functionality with a powerful software engine to give you complete freedom to express yourself. From editing individual stitches to layouts of large multi-hoop designs and full stitch simulations, Digitizer can handle it all with ease.
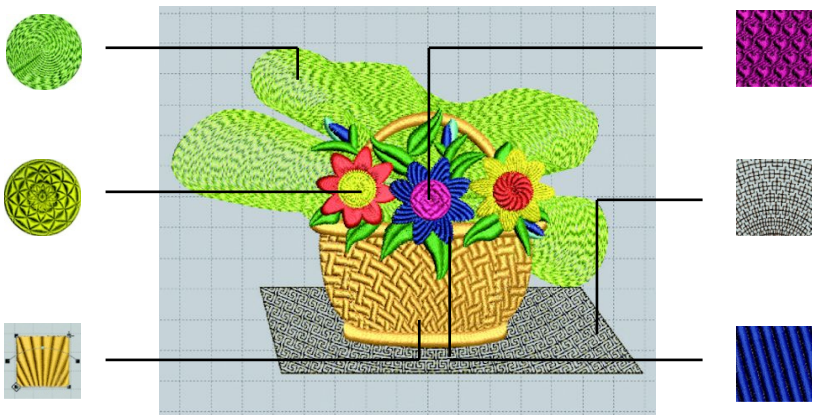

Click your way to Beautiful Embroidery

Digitizer can turn all kinds of images into embroidery patterns

With CorelDRAW Essentials X5, images can be created and edited making preparation work easier

When you want to emphasize certain details of an embroidery pattern, the embroidery settings make it so easy !
You can use the large design preview screen to check your work, as well as remove or combine thread colours as you like !

## Object outline to enhance designs
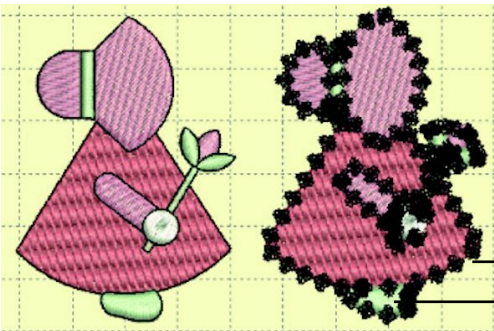

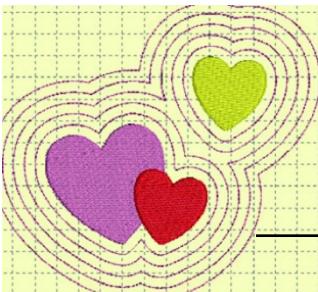

Customise your embroidery !
Choose from a variety of different outline stitches to add to your embroidery

Triple Run   Motif Run

### Exciting detail with Offset Outline

Echo stitches are now available for many different motifs!
Great for Hawaiian quilts and other craftwork, these eye-catching offset stitches are useful for a variety of projects.

Digitizer V4.0 automatically breaks up oversize designs into hoop-sized portions so you can create even bigger designs !

Applique stitching is more powerful than ever before with a easy edit screen ! Reproduce the actual texture of your fabric and eliminate unwanted overlaps for a beautiful finish.

Powerful Monogramming to personalise your projects

There's a complete monogramming editing screen offering a rich selection of lettering fonts with 16 lettering layout styles. You can combine monograms and motifs to make your design unique or create original emblems / badges.

Transfer designs with Advanced PC Connectivity

Digitizer offers enhanced creativity on all Janome embroidery machines. It links directly to the MC12000, MC11000 and MB4 to make transferring designs even easier.
The software is also compatible with the MC9900, MC350E and 200E.

Digitizer Jr

Whilst Digitizer MBX is a powerful and professional level software program Janome can also offer a reduced feature version in Digitizer Jr V4.0. This program is very easy to use and yet offers powerfully creative features to enhance your projects.
